

After analyzing 100+ studies on why millions struggle with weight loss, Berkeley MD exposes Big Food's dirty secret...

“Infestation of Antibiotics In Our Food Supply Has Destroyed Our Body’s Natural Ability to Burn Fat and is to Blame for Chronic Weight Gain!”

Discover a safe, natural protocol that repairs the damage done by antibiotics to revitalize the body’s metabolism and melt away 8.5% of stubborn fat *without* gnawing hunger pangs or miserable ‘bootcamp’ workouts.

If you struggle to lose weight...

Jump from diet to diet...

Follow one fad diet after another like a lost sheep...

But *still* can't get the results you want...

You need to know it's not your fault.

The reason why you've "ballooned" while your friends stay thin as a post...

Isn't because you don't have enough will power.

The reason your trim waist has been replaced by blubbery love handles...

Isn't because you aren't following the right diet guru or cutting calories enough.

You see, the reason why you find it IMPOSSIBLE to lose stubborn pounds *isn't* your fault at all.

It's because...

You Body's Fat Burning Mode Has Been Sabotaged!

Breaking research, revealed on this page, has uncovered that our food supply has become infested with fat triggering drugs.

Drugs that decimate your body's ability to turn food into nutrients and fat into energy like it's supposed to.

Instead, more of the food you eat is turned into ugly fat that refuses to melt away...no matter how many hours you spend sweating on a treadmill...or cutting calories to the point of starvation.

As after studying over 100 studies into people's inability to lose weight, Dr Lee Riley, Professor of Epidemiology and Infectious Diseases at the University of California, Berkeley, found that the *real* culprit for America's ballooning waistline isn't what we thought at all.

It's NOT processed sugar, carbs, or even trans-fats.

While these are all factors, he found that the real villain that's causing millions of Americans to get fatter every year, despite the billions spent on diet programs, is something else entirely.

As when he compared the upward swings on two charts...he saw something that made him rub his eyes in disbelief.

He saw a direct match between the heavy industrial use of drugs to fatten livestock and the explosion of obesity in America.

And it led to him questioning:

Are Antibiotics Making You Fat?

Farmers have been feeding cows, pigs and chickens vast quantities of antibiotics for decades.

It's already well known that scientists fear these drugs are driving the doomsday scenario of antibiotic resistant bugs.

Yet scientists are now *also* sounding the alarm that antibiotics are making us fat too.

Antibiotics were originally fed to farm animals to prevent the spread of dangerous bacteria and diseases.

But ranchers soon discovered they had a surprising side benefit.

They made animals *ravenous*. Even better, they made them get fatter and fatter without adding a single extra spoonful to their feed.

One study on chickens found they grew 2 and a half times faster on antibiotics.¹

While another found that antibiotics makes animals pile on 15% more fat on the same portion sizes.

Big Food couldn't believe its luck.

It's like it had found a miracle potion for creating fatter animals it could sell off at a juicier profit....and it was only too happy to cash in.

Thinking they'd hit the jackpot, Big Food enthusiastically fed livestock more and more antibiotics.

But...just like many of the other disastrous changes we've made to our food supply, it's had...

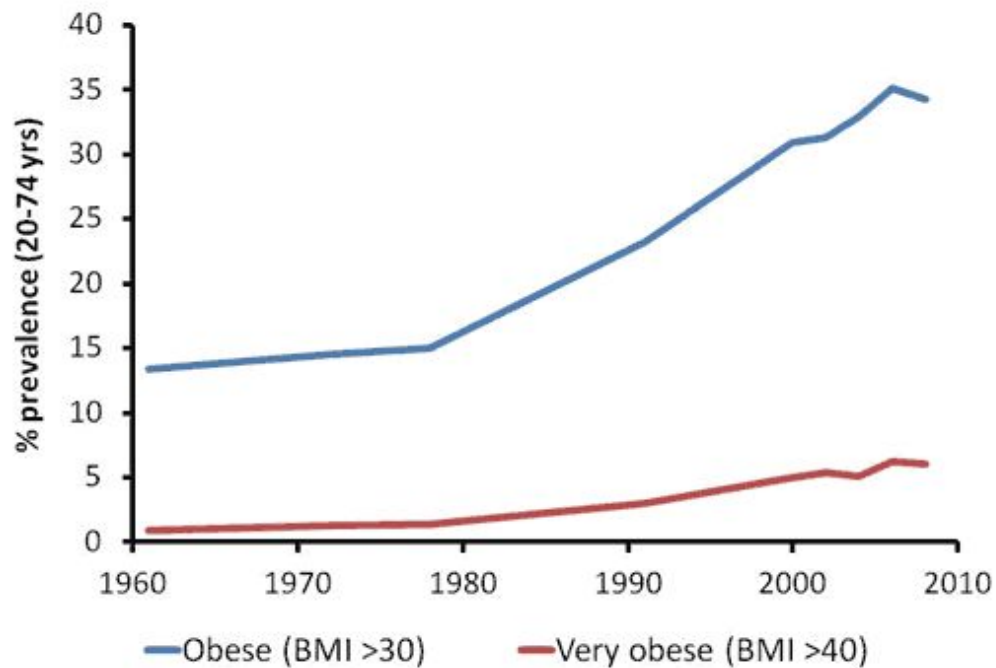

Unintended Consequences for Our Bodies

In the late 70s, the feeding of antibiotics to cows, pigs and chickens became unchecked and rampant.

Here's what happened to America's waistline:

¹ <https://www.scientificamerican.com/article/antibiotics-linked-weight-gain-mice/>

Obesity in the US, 1961-2009

CDC NHES and NHANES 1960-2008

USDA ERS loss-adjusted food disappearance

As you can see, rates of obesity have rocketed in tandem with the ingesting of antibiotics.

This is the inconvenient truth that Big Food and Big Pharma don't want you to know about.

A dirty secret that allows them to continue lining their pockets at the expense of our expanding waistlines.

As the startling conclusion, reached by Dr Riley, is that our inability to lose stubborn pounds is *nothing* to do with calories at all...

"The US food supply provides about 3,900 calories per person a day today, compared to 3,400 calories in the early 1900s."

says Dr Riley,

"Yet obesity increased very slowly until the middle of the 1970s, then exploded. What changed?"

He discovered that what changed was the feeding frenzy of antibiotics.

The amount of antibiotics fed to farm animals has skyrocketed 22 percent in just the last five years alone.

And today's industrial farming machine now feeds 4 in 5 of America's total antibiotics supply to its animals.

As Dr Riley notes,

“Widespread use of antibiotics to promote growth in food animals really took off over the past 20 years or so with industrial intensive farming. And that coincides with our obesity epidemic...It makes sense. We know that antibiotics promote weight gain in livestock animals. We're animals, so why should we be different?”

Yet, even if you've never eaten a juicy chicken leg or sat down to feast on a griddled steak in your life...

Even Vegans Aren't Safe!

As difficult as it is to believe...the situation has got so out of control that even if you stopped eating meat today and joined the vegan tribe, there may still be antibiotics in your dinner plate.

A study by the Proceedings of the National Academy of Sciences found that the use of manure from farm animals has infested the soil.

So *even* organic vegetables now contain high levels of antibiotics.

And don't think spending the extra dollars to shop in the organic section will make you safe...as it's practically impossible to escape the infestation of antibiotics.

As it's not just antibiotics in meat, fruit, and vegetables you need to worry about.

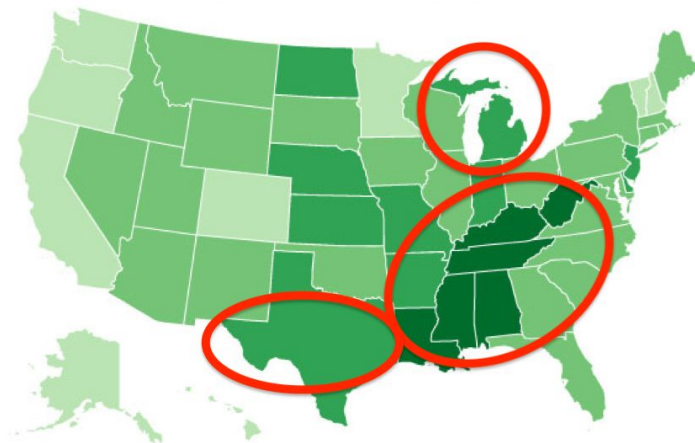

The aggressive push by Big Pharma to convince doctors to prescribe them for everything from a sore throat to a winter cough has led to 4 in 5 Americans swallowing these fattening drugs at least once every year.²

² <https://www.cbsnews.com/news/cdc-4-out-of-5-americans-prescribed-antibiotics-each-year/>

Take a look at this map.

Antibiotic prescriptions per 1,000 people, 2010

500-699 700-899 900-1,099 1,100-1,299

Source: CDC

Mother Jones

The states in America that consume the most antibiotics are colored in dark green.

Now take a look at this next map.

Obesity rate by state, 2010

20%-23.5% 23.5%-27% 27%-30.5% 30.5%-34%

Source: CDC

Mother Jones

The states with the highest obesity rates are dark blue.

What do you notice?

As you can see for yourself, there's an almost exact match between states with the highest antibiotic use and rampant obesity.

The link between rampant use of fattening drugs and rapid weight gain across America is becoming clear as day.

As experts at the health journal Berkeley Wellness have reported:

"There's another concern that scientists are beginning to study. Just as antibiotics promote weight gain in food animals, are they also contributing to obesity in humans?"

So while the FDA may claim the level of antibiotics in our food is safe and there's nothing to worry about, the evidence tells a different story.

But don't expect to hear about this in the news or for allowed to go viral in social media.

Heavy use of industrial antibiotics is making Big Pharma and Big Food fabulously rich.

They'll likely use every dastardly tactic in their playbook to suppress this information reaching the public.

And that includes silencing us.

Right now, armies of lawyers may be writing cease and desist letters to have this page taken down.

If you try to share it with an overweight friend later today and it's gone...you'll know we've been silenced.

So while this page is still up, if you suffer from uncontrollable food cravings, chronic weight gain, and digestion problems, grab a pen and paper. Read this page to the end and share it with anyone you know who suffers from chronic weight gain.

As there's also good news - A team of renowned scientists and health practitioners have discovered a scientifically proven "four step fat burn repairing" process.

A process that repairs the damage done by antibiotics so your body can turn food into nutrients and fat into fuel like it's supposed to.

It takes only seconds a day to do yet within weeks it can help you lose 5, 10 or even 15 lbs of ugly fat.

Even better you can keep the weight off for good, while also flooding your body with energy.

And it can work even if you've:

- Been unable to snip the strings of yo-yo dieting for years...
- Sweated through gruelling boot camps without barely losing a pound...
- Tried eating keto, paleo, gluten free, and even gone vegan...

As this “four step fat burn repairing” process has already helped over 12,000 people to incinerate stubborn fat and stop it returning.

This includes Melanie Warren, who experienced the pounds dropping off without counting a single calorie. She writes,

“I have noticed two things, first my bloating and feeling puffy has decreased and second my cravings and appetite is decreasing as well. I have lost 5 pounds in the two weeks without effort.”

And Patricia C. who remedied her arthritis and insomnia while gaining a dramatic drop in weight:

“I’m just about at the end of my first 30 days and can say my joints are happier, I’m sleeping more soundly and saving the best for last, lost 8 pounds!”

You can read all about this 4 step process and how to implement it further down this page.

And it’s a process every overweight American needs to know about. As for them, at least one of two of the steps are broken.

There are all sorts of reasons why their bodies have stopped processing fat like their supposed to. This then makes it impossible to lose weight even if you train like a marine and eat like a rabbit.

Yet, if you get just the first step working, this alone has been proven in a huge Japanese study to melt away 8.5% of stubborn belly fat.

But if you're not someone who's serious about losing the 5, 10 or even 15 lbs you need to gain your dream body, I recommend you close this page.

Just do so knowing that, unless you put into action the four step solution revealed, not even the best crossfit instructor in the world can help you achieve the slim body of your dreams.

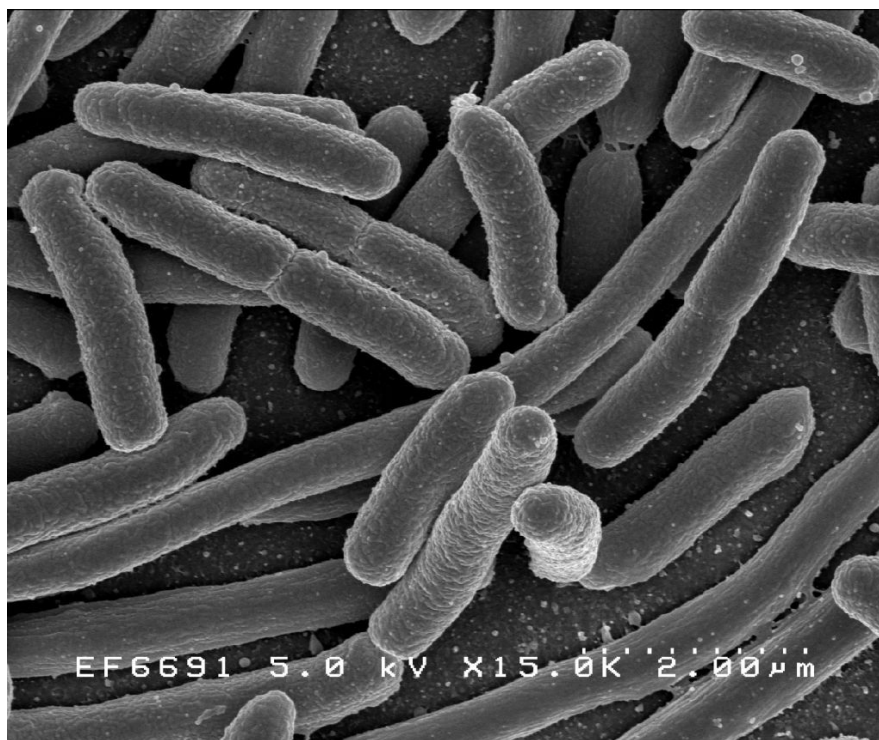

As this solution is the only way to:

Restore Your Body's Natural Fat Burning Ability For Effortless Weight Loss without the Misery of Starvation Dieting

Before I share it with you, I first need to quickly explain why the huge volume of antibiotics prescribed by doctors and fed to our livestock has annihilated your ability to burn stubborn fat.

It's all to do with your gut.

In your gut are trillions of microbes. They're collectively known as the "microbiome".

Your microbiome is responsible for all sorts of critical functions, like digesting food, fending off infections, and absorbing the nutrients your body needs for energy, growth, and repair.

Your gut is also vital for your ability to burn fat.

As long as your gut is healthy, your body can turn food into nutrients and burn off unwanted fat as energy.

But if your gut is damaged, it's ability to digest food breaks down. Instead it gets stored as ugly fat around your belly, upper arms, and thighs.

This is why, even if you eat all the right foods and go for daily strolls, the stubborn pounds just won't go away.

As Dr Nancy Rahnamam, a bariatric physician in California, says,

“Gut health is a significant determinant of one’s metabolism and likelihood of gaining weight. The gut is where all of the body’s nutrients, micronutrients and minerals are absorbed. Therefore, if there is impairment in the gut, the body will likely be deficient in key nutrients that are necessary for an optimal metabolism.”³

It’s also been recently been discovered that in your gut there are two main types of bacteria that control your weight.

The new understanding has allowed us to finally solve the riddle of...

Why Some People Gain Weight Easily and Others Hardly Gain Weight At All

³ <https://www.prevention.com/weight-loss/a21528828/probiotics-weight-loss/>

Ever wondered why lucky skinny people get to eat as much pizza as they like without barely gaining a pound?

And how they barely exercise, yet have the slim physique of a catwalk model?

It's because they have more of the "skinny" type of bacteria in their microbiome.

Skinny bacteria joyfully gobbles up food and turns it into nutrients and energy.

This allows thin people to eat pretty much anything they like without fear of gaining weight.

So you see, when your gut is packed with skinny bacteria your body can process food like it's supposed to. And your natural fat burning mode can run in top gear, incinerating fat and keeping you slim.

But if you don't have enough, you can struggle to lose a single pound no matter how much you cut calories and exercise.

Instead, you likely have more of the lazy "fat" type of bacteria.

These fat bacteria are useless at digesting food.

They shove more of the food you eat into your body's cells, causing chronic weight gain and uncontrollable cravings for junk food.

And this is no theory based on just what happens in a petri dish.

It's been verified in both animal and human studies.

In one experiment scientists took the gut bacteria from an obese mouse and put it in the gut of a thin mice. **Within days the thin mouse's weight ballooned despite no changes to its diet.⁴**

And this phenomena hasn't only been observed in mice. It applies to humans too.

An analysis of the gut bacteria of identical twins found that the obese twin suffers from having more fat inducing bacteria than their thin twin.

This same simple rule applies to all of us.

A study of 300 Danes by the eminent scientist Emmanuelle Le Chatelier found that **those who were overweight had guts packed with fat bacteria.**⁵

This made it impossible for them to lose weight long-term no matter how much they spent on workout gadgets, trendy detoxes, or appetite suppressant pills.

The key point is this:

When your gut contains more “thin bacteria” your body can burn fat at will.

But when it’s clogged up with “fat bacteria” no amount of “healthy” diet food, slimming products like “green tea”, or brutal exercise is going to help you lose weight long-term.

Instead you’re doomed to forever struggle with yo-yo dieting...jumping from one diet guru to another...and feeling miserable with how you look.

⁵ <https://www.nature.com/nature/journal/v500/n7464/full/nature12506.html>

If you've been struggling to lose weight for as long as you can remember...perhaps you already think that when people see you they think you're lazy, unsuccessful, and not in control of your life...

Or fear you'll never feel attractive or confident about your appearance ever again.

If so, you need to know that chronic weight gain can be reversed. And I'll reveal exactly how in a minute.

Just imagine how life transforming it can be to **finally have a body that burns fat like it's supposed to.**

A body that's able to digest food as nature intended, instead of storing it as ugly pounds around your belly, upper arms and thighs.

What if in a few weeks....

You get dressed in the morning and feel your clothes are looser.

You clean your teeth look in the mirror and notice your face is thinner...your cheeks more defined.

Or how about the warm rush of pride when work colleagues comment how much slimmer you look, and this time you know it's for keeps.

That would be really something wouldn't it?

To finally put chronic weight gain in the past and to say hello a slimmer, sexier, younger looking body.

For this to come true all you need to do is drive out the fat spreading bacteria from your gut and replace it with the fat gobbling good guys.

Common causes of fat bacteria overload include:

- X Eating too much processed food**
- X Chronic stress**
- X Alcohol**
- X Smoking**

And now you can add antibiotics to the list.

Because...whether prescribed by your doctor or eaten from artificially fattened meat...

Antibiotics are like detonating a nuclear bomb in your gut.

They annihilate every bacteria living there.

The goal is to wipe out the bad guys that cause illness and disease.

But by also wiping out the good guys, **it's the unhealthy fat bacteria who soon recover and take over.**

With few of the good bacteria to mount a defense to stop them, the bad bacteria feed, multiply, and spread.

Until they take control of your gut itself.

When that happens, you get uncontrollable cravings for sugary snacks and junk food...your ability to turn food into nutrients breaks down...and layers of ugly fat spread all over your body.

Even a short course of antibiotics can wipe out the thin bacteria for up to a year.

Yet, as Dr Riley's investigation uncovered, **it's not just antibiotics prescribed by doctors that may be driving your food cravings and chronic weight gain.**

As with every mouthful of beef, chicken, pork, and even organically grown vegetables, you may be swallowing antibiotics that kill off your thin bacteria and trigger an upsurge of fat microbes in their place.

Now here's the good part - **There's now an effortless way of replenishing your gut with "thin bacteria" and wiping out the "fat" blobby ones.**

And it's all thanks to the four step process mentioned at the start of this page.

It takes only seconds to do each day. Yet within a few weeks you can look forward to:

- ✓ **Stores of ugly fat converted into clean, natural "all day" energy**
- ✓ **Every mouthful of food becomes a more potent dose of health enriching nutrition**
- ✓ **Your brain, muscles, and joints get more of the nutrients they need to be fit and healthy**
- ✓ **Gas, bloating, and constipation all vanish**
- ✓ **Even your brain can feel clearer...sharper...and more focused**

In fact, you'll be glowing with such newfound health and vigor. It may even get tongues wagging at the office about what's your "youthening" secret.

Sound like just a fantasy?

Well I assure you, it can soon be your new reality.

As with this simple 4 step process you can...

Reset Your Gut For Optimum Digestion And Accelerated Fat Burning

Here at Better Body, our mission is to help people gain a slimmer, healthier body by restoring the body's natural fat burning ability.

To complete our quest...we dug deep into the science on how to wipe out the bad bacteria and repopulate your gut with thin bacteria in their place.

And what we soon discovered is that this can't be done simply by swallowing an everyday, off-the-shelf probiotic supplement, no matter what they claim on the label.

Even worse, we found that most, if not all, probiotic supplements are a waste of money.

The ugly truth is that just because it says probiotic on the label doesn't mean it's going to be effective at helping you lose weight.

As many manufacturers have thrown in as many probiotic strains as they can without doing their due diligence to check if the science lives up to their marketing.

This has resulted in a glut of probiotic supplements that do little more than make expensive pee.

When it comes to buying a probiotic to repair your body's fat burning ability, there are four things you need to check:

1. Does it Contain Clinically Proven Fat Burning Bacteria?

The fact is that 99% of the supplements found on Amazon or in the supermarket won't help you to lose weight.

What's worse, they may even cause you to GAIN weight.

As many contain strains that can actually boost levels of the fat bacteria you're desperate to get rid of.

One probiotic strain to watch out for, in particular, is "acidophilus".⁶ This can make you balloon in weight with you having no clue as to why.

2. Does it Contain an Immunity Booster?

A healthy immune system is vital for how fast, readily and effectively thin bacteria take root in your gut.

If your immunity is low, even the most potent probiotic money can buy will struggle to repopulate your gut with "thin bacteria".

The good news is there's a probiotic strain that not only helps you lose weight but also boosts your immune system. You can find out what it is further down this page.

3. Does it Contain Vital Essential Vitamins and Minerals?

The thin bacteria in your gut rely on key minerals for them to prosper and thrive.

But if you've living off a heavily processed diet for a while, your mineral levels are likely at rock bottom.

This makes it tough for any probiotic you swallow to survive long enough to repopulate your gut. This leaves the doorway open for fat bacteria to rush back in and seize control.

So it's vital to take a probiotic that also contains essential minerals if it's to have a chance of colonizing your gut with thin bacteria.

Based on these findings on why 99% of probiotics fail, we knew we had our work cut out for us.

So we dug even deeper into the science on probiotics, the gut, and weight loss.

We read all the research papers, analyzed the latest clinical studies, spoke to dieticians, interviewed functional health doctors, hired expert nutritionists, and even quizzed leading microbiologists.

⁶ <https://www.sciencedirect.com/science/article/pii/S0882401012001106>

Until we finally reached our Erueka! Moment.

A point where we'd identified the four key processes your body must complete to reignite your natural fat burning mode for effortless weight loss.

This is the "four step fat burn repairing" process mentioned throughout this page. And now, here it is...

The 4 steps are:

- 1. Repopulate**
- 2. Reduce**
- 3. Rejuvenate**
- 4. Restore**

Unless your body can complete each step, any weight loss attempt is doomed to fail.

The good news is our research also revealed the optimal natural ingredients you need to complete every step with ease.

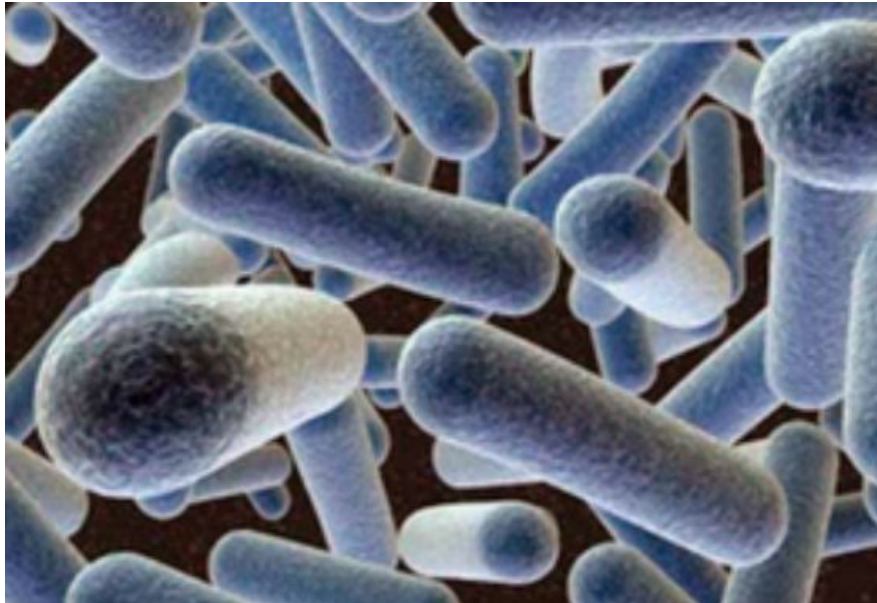

The first step is to...

Repopulate your gut with fat burning bacteria.

Filling your gut with the good guys is the first vital step in repairing the damage to your gut by antibiotics.

Selecting the ingredient for this step was a no brainer.

It simply had to be the "fat incinerating" strain called Lactobacillus Gasseri, or L Gasseri for short.

As...

Breaking studies of L Gasseri have revealed it may be the most powerful weight loss aid in the world.

It's been found to be life transforming at repopulating the gut with thin bacteria and triggering effortless weight loss.

In fact, it's already been given the stamp of approval by many respected functional health doctors.

This includes Dr. Bulsiewicz. who says:

“The ideal probiotic would feature the Bacteroidetes family, specifically several types of Lactobacillus bacteria including L. gasseri.”

Dr Mercola also hailed its fat burning potential, noting,

“Daily supplements with the probiotic Lactobacillus gasseri SBT2055 may help weight loss in people with obese tendencies.”⁷

And the popular internet physician Dr Josh Axe went on record to say,

*“L. gasseri—may be especially effective when it comes to weight loss. L. gasseri, in particular, has been associated with reductions in body weight and belly fat, with one study showing that participants taking L. Gasseri lost 8.5 percent of their belly fat after just 12 weeks.”*⁸

This study Dr Axe is referring to was conducted by a team of Japanese scientists at the Milk Science Research Institute, mentioned at the start of this page.

It was a follow up to a previous study in which overweight subjects lost an average of 4.6% of their belly fat and a 1.4% drop in overall body weight.⁹

And unlike nearly every weight loss study, this was achieved *without* dieting or extreme exercise.

Wondering if the results were a fluke, the Japanese scientists reran their experiment.

In labs across the country, they conducted a double-blind, randomized placebo-controlled study - the gold standard of clinical trials.

210 overweight subjects were asked to drink either a milk containing L Gasseri or a milk without it for 12 weeks.

At the end of the trial, the Japanese scientists were stunned to discover that their subjects' weight loss had exceeded even their best estimates.

As those who'd drunk the milk containing L Gasseri had melted away an average 8.5% of visceral belly fat.¹⁰

⁸ <https://www.rd.com/health/diet-weight-loss/the-best-probiotics-for-weight-loss/>

⁹ <http://www.probioticsone.com/content/Study3.pdf> - Kadooka Y et al. “Effect of Lactobacillus gasseri SBT2055 in fermented milk on abdominal adiposity in adults in a randomised controlled trial.” Br J Nutr. 2013 Nov 14;110(9):1696-703. DOI: 10.1017/S0007114513001037.

¹⁰ <https://www.ncbi.nlm.nih.gov/pubmed/23614897> - Kadooka Y, Sato M, Ogawa A, Miyoshi M, Uenishi H, Ogawa H, Ikuyama K, Kagoshima M, Tsuchida T. Effect of Lactobacillus gasseri SBT2055 in fermented milk on abdominal adiposity in adults in a randomised controlled trial. Br J Nutr. 2013 Apr 25:1-8. [Epub ahead of print]

And just as before, this was simply from adding L Gasseri to their daily diet. Not from brutal exercise or starvation dieting.

The team of Japanese scientists swiftly gave L Gasseri their stamp of approval, stating in their study's conclusion that:

"These findings demonstrate that consumption of LG2055 exhibited a significant lowering effect on abdominal adiposity"

They're not alone in hailing L Gasseri's potential as a revolutionary weight loss aid.

The fat incinerating power of L Gasseri has been verified by teams of scientists at the French National Centre for Scientific Research (CNRS) and from Inserm (French National Institute of Health and Medical Research).

They concluded that consuming L Gasseri results in:

- Improved digestion of food and nutrient absorption
- Reduced gas, bloating, IBS, and constipation.
- Regulation of metabolic pathways and absorption of fatty acids
- Enhanced immunity against ill health and disease

They even found that improving gut health from L Gasseri may relieve severe conditions like cancer, Crohn's disease, depression, anxiety, and even bipolar disorder.¹¹

So you see, when you add it to your daily diet you can look forward to no longer feeling breathless and drained of energy all the time.

Instead, you'll have a body that burns fat on its own, keeping you slim, fit and youthful looking.

With this power plant bacteria revving your fat burning engine, you can finally melt away 5, 10 or even 15 lbs of ugly fat with none of the misery, struggle, and rebound weight of normal dieting.

Just as Vicki Oleskey from Boston Massachusetts, experienced.

11

<https://www.positivehealthwellness.com/diet-nutrition/lactobacillus-gasseri-a-key-probiotic-for-optimising-weight-loss-and-trimming-the-waistline/>

She says,

"I'm very happy with the results. So far I seem to have more energy. My sleep is much better and the most important thing is that people have actually said to me "what have you done, you look thinner". And I have not gotten on the scale but I know that my stomach is flatter and I'm very happy about that."

So, as the scientific evidence and experience of real people proves, L Gasseri is a powerhouse at replenishing the gut with thin bacteria and triggering effortless weight loss.

Yet, L Gasseri is only the first step and will only provide short-term relief on its own.

As your body also has to complete step two, which is to...

Reduce Inflammation

If you've been overweight for a while, there's likely a firestorm of inflammation raging through your body without you even knowing it.

Chronic inflammation is the #1 cause of all serious diseases. It also makes long-term weight loss impossible due to the way it increases levels of the fat spreading bacteria.

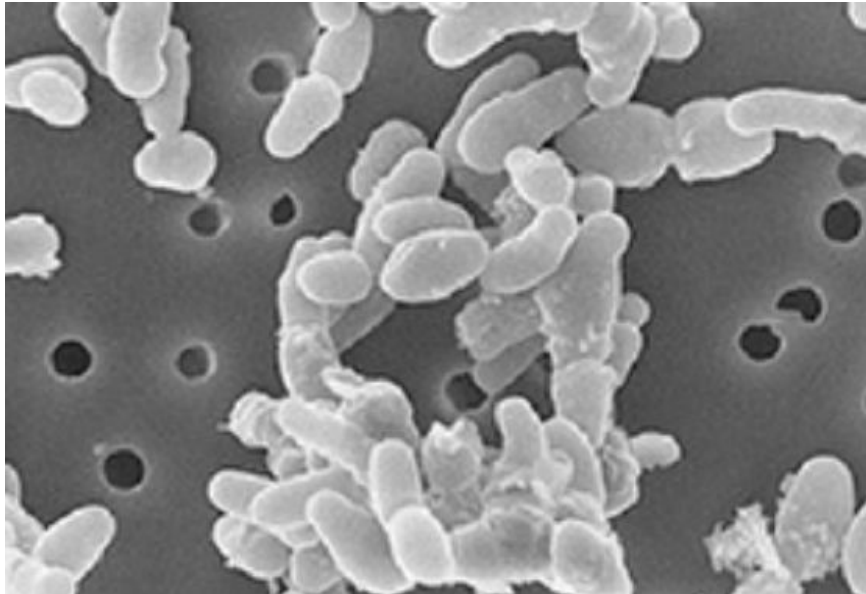

So for your weight loss gains to take hold, you also have to get inflammation under control.

To make this happen, we included three key ingredients that are like sending out an army of firefighters to douse the flames.

The first one is another probiotic strain:

B Breve.

"Me and my friend are doing it together and we both notice it is helping us. Her brain fog has lifted and my energy has been great. We are ready to order our next bottles after finishing 2 each:-)" - Michelle W

This probiotic is like spraying a firehose at inflammation throughout the body.

A key measure of inflammation is CRP.

And a 12 week Japanese animal study found that B. Breve *“resulted in significantly decreased CRP levels compared with the placebo group”*.

The same study also found that B Breve contributed to significantly lowering fat mass.¹²

While another team of Japanese researchers, led by the respected scientist Yodai Kobayashi, found that giving B Breve to mice flushed inflammation from their cells and helped to reverse the symptoms of Alzheimer's.¹³

So with a daily dose of B Breve, you can look forward to all manner of health benefits from dousing the wildfires of inflammation, along with weight loss.

But we didn't just stop at B Breve.

As the next ingredient for reducing inflammation is...

Turmeric Root Extract.

¹² C-reactive Protein & B.Breve (Randomised Controlled Trial)
<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4463018/>

¹³ <https://www.nature.com/articles/s41598-017-13368-2>

Turmeric has a long history of fighting inflammation in the ancient Indian system of Ayurveda medicine.

The secret to its healing powers is that it contains the active ingredient curcumin.

Curcumin is more popularly known as the spice that gives Indian food its creamy color. Yet studies suggest it may also be one of the most powerful anti-inflammatories in existence.

A review of studies by the Department of Nutrition, at Michigan University, concluded that:

“Curcumin has been shown to suppress inflammation through many different mechanisms [beyond the scope of this review], thereby supporting its mechanism of action as a potential anti-inflammatory agent.”¹⁴

But while backed by science, a common problem with turmeric supplements, rarely mentioned on the label, is how little gets absorbed by the body.

So to fix that we included a bonus ingredient...

“Bioavailability Booster” BioPerine.

¹⁴ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5664031/>

Warning - If ANY of these steps in the “fat burn repairing process” aren’t completed, you’ll never succeed at long-term weight loss no matter how much you exercise or how little you eat!

BioPerine is a compound extracted from black pepper.

And the same review by the Department of Nutrition at Michigan University revealed that *“piperine is the major active component of black pepper and, when combined in a complex with curcumin, has been shown to increase bioavailability by 2000%.”*¹⁵

So after reading this we knew we had to include the “Bioavailability Booster” BioPerine.

Yet, even after adding this ingredient, we wanted to leave no stone unturned in trying to reduce the damage done by inflammation.

So we added a third inflammation wiping ingredient...

Every Fat Burn Restoring Ingredient Is...

- Backed by Research
- Shown to Aid Fat Loss
- Proven to Help Repair the Gut
- Zero Side Effects

¹⁵ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5664031/>

- Zero Synthetic
- Not a Stimulant

Moringa Leaf.

Moringa Leaf is like a sponge at soaking up inflammation and toxins in the bloodstream.

The Journal of Food Science and Technology reported on one study in which 30 women plummeted their blood sugar 13.5% just by swallowing a single tablespoon of moringa leaf powder every day.¹⁶

While an animal study at the University of Medical Sciences in Isfahan, Iran, found that Moringa Leaf helps to douse inflammation in as little as 5 days.¹⁷

So with the addition of Moringa Leaf, we'd now got extinguishing inflammation covered.

But even after repopulating the gut with thin bacteria from L Gasseri and dousing the inflammation to stop fat bacteria returning, there are still two more steps to repairing the body's fat burning mode.

¹⁶ <https://link.springer.com/article/10.1007%2Fs13197-012-0859-9>

¹⁷ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4103706/>

And the third step is to...

Rejuvenate your immune system.

“Not only have I noticed my cravings & weight decrease, I've noticed my pain levels have decreased. I live with chronic pain & migraines. The anti-inflammatory ingredients are what made me try ProVitalize initially. The weight & fat loss are a great bonus.” - Shannon M

For this we added a third probiotic strain...

B. Lactis.

As mentioned, when your immune system is weak the thin bacteria added to your gut will struggle to survive.

So we knew we had to add B Lactis, known as the “Booster Shot” of probiotics.

B Lactis has been found in studies to be like sending in a clean up crew to mop up infections and disease.¹⁸

This includes cleansing a toxin blamed for 610,000 deaths a year - LDL cholesterol.¹⁹

¹⁸

<https://www.globalhealingcenter.com/natural-health/bifidobacterium-lactis-the-health-benefits-of-probiotics/>

¹⁹ <https://www.cdc.gov/heartdisease/facts.htm>

A six month study, reported in the journal Nutrition & Metabolism, found that eating a yoghurt containing B. Lactis for 6 months can **"significantly reduce total serum cholesterol and LDL cholesterol and improve the LDL:HDL cholesterol ratio"**.²⁰

In fact, B Lactis was found to plummet total cholesterol 4% and the heart attack triggering LDL-cholesterol by 5%.

So with this “Booster Shot” probiotic enhancing your immunity, you can look forward to improving your cardiovascular health as well as melt away ugly belly fat.

With B Lactis added to the list, that’s three of the four steps for repairing the body’s natural fat burning mode now completed.

The final step is to...

Restore key minerals.

If you’ve been living off processed “Frankenfoods” for a while, your body is likely starved of nutrients.

So we included a couple of extra ingredients to flood your body with key minerals, in a far superior way to your average multi-vitamin.

First we included...

Curry Leaf Extract.

²⁰ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4761174/> - Kiessling G, Schneider J, Jahreis G. Long-term consumption of fermented dairy products over 6 months increases HDL cholesterol. Eur J Clin Nutr. 2002;56:843–849. doi: 10.1038/sj.ejcn.1601399.

This is a powerpack of nutrients, which includes vitamin C, vitamin A, vitamin B, vitamin E, antioxidants, plant sterols, amino acids, glycosides, and flavonoids.²¹

Some of the health enhancements you can expect from this nutritional gift from nature include healthier nails, skin and hair.²²

So from adding this to your diet, you can gain an all round more beautiful body to go with your slimmer waist.

Yet, we went further still in delivering a transformative dose of nutrition to your body, and also included...

Sunflower Lecithin.

Like BioPerine, lecithin is a nutrient booster that helps maximize the potency of every ingredient already listed.

And we didn't include any type of lecithin.

As while many supplements contain this ingredient, it's typically been extracted from soybeans.

This requires lots of harsh chemical solvents, like hexane and acetone.

The last thing we wanted was to add nasty chemicals to our all natural formula.

So we sourced the rawest version of Lecithin possible, which is found in sunflowers.

With Sunflower Lecithin added to the mix, you can be assured of gaining the full potency of every handpicked ingredient.

So that now completes the optimal set of ingredients your body needs for it to recover from the damage of antibiotics and to repair your body's natural fat burning mode.

After completing our list, all we then had to do was combine them in the optimal amounts.

So...after extensive testing, clinical trials, and collecting feedback, our new groundbreaking supplement is finally ready to launch.

Introducing...

Provitalize -

The ONLY “4 Step” Supplement for Repairing Your Body’s Natural Fat Burning Mode

Provitalize is a breakthrough in repairing the damage done to your gut by antibiotics and for revitalizing your body’s natural ability to burn fat as fuel.

It contains all the key ingredients your body must consume for it to repair its fat burning mode in one easy to swallow tablet.

Due to the complex range of ingredients, it’s practically impossible to gain the same level of gut restoring, weight shredding nutrition from diet alone. Yet with Provitalize all you need to do is swallow one tablet a day to revitalize your fat burning engine and switch from fat storing mode to fat incinerating overdrive.

You can then look forward to:

- ✓ **Restoring your gut from the damage of antibiotics, processed food, alcohol, smoking, and stress**
- ✓ **Converting food into health enriching nutrients**
- ✓ **Sending stores of fat flowing to the muscles to be burned off as energy**
- ✓ **Slamming the door on more fat getting shoved into your body’s cells**
- ✓ **Cleanse your digestive system to alleviate bloating, gas and IBS**

As you can see from the ingredients list, we’ve really gone to town in tracking down the best ingredients to create what we believe to be the most potent weight loss supplement on the market today.

Yet that’s not all that makes Provitalize so special.

As another reason many pricey supplements are little better than sugar pills is due to their low quality capsules.

Cheaply made capsules melt like an ice cube in a volcano the moment they reach your stomach acid, depriving you of their health benefits.

Pure Health and Zero Artificial Stimulants

- Gluten-free
- Soy-free
- Dairy-free
- Egg-free
- Sugar-free
- GMO-free
- Stimulant-free
- Vegetarian-Friendly
- Vegan-Friendly

So we invested significant time and money into fixing a problem that stops most supplements from working. And finally succeeded in creating:

“Delayed-Release” Capsules.

These are made from a special coating that holds them together far longer than your average off-the-shelf supplement. Then at the optimum moment, they open up and parachute in their contents to your lower intestine for maximum absorption.

So with Provitalize, you're getting a supplement for which no expense has been spared in optimizing its ingredients and the quality of how it's manufactured here in the USA.

So you now know why and how we developed Provitalize.

Yet, what really matters is how well Provitalize works at triggering effortless weight loss, wouldn't you agree?

We believe that when you add Provitalize to your daily diet, some of the changes you'll experience within 30 days include:

- ✓ Your digestive system goes from being clogged up with fat bacteria to running on the good guys like a clean, high precision machine
- ✓ Stored fat gets turned into high octane energy for supertrooper productivity
- ✓ Embarrassing symptoms like gas, bloating, and IBS all fade away, freeing you to eat at your favorite restaurants and even enjoy dessert
- ✓ As sugar craving microbes get wiped out, your cravings will vanish, allowing you to escape whispering voices telling you to get the ice cream from the freezer
- ✓ You can regain a happier hormonal balance, with less of the stress inducing cortisol and more feel good endorphins
- ✓ A flatter belly, thinner thighs, and slender arms that take years off your visual age, help you feel sexier, and give you a newfound self confidence that shows
- ✓ Melting away the fat helps relieve joint and arthritis pain, so you can enjoy your favorite sports and chase the kids around the garden again
- ✓ Douse raging fires of inflammation throughout your body to plummet your risk of type 2 diabetes, heart attacks, and strokes

These are just some of the benefits you can look forward to after adding Provitalize to your diet. And all while waving “goodbye” to junky appetite suppressants, impossible to follow diets, or the misery of calorie counting.

“I feel SO MUCH BETTER on this product. I have tried many probiotics in the past and from day 2, I could FEEL this one working more effectively for me. I have less bloating, cramping, gas and more energy! I am very grateful I took a chance and tried it! It is pricey, but I can't "afford" to be sick for the rest of my life either!” -

Tracy H

Now, I know all the benefits of Provitalize I've just mentioned sound remarkable. So I want to make it clear that not everybody can expect to gain all these results overnight.

Some people may find it takes more than two weeks to repopulate their gut with fat-gobbling bacteria.

And if your gut health has been hit hard by years of abuse from antibiotics, processed food, stress and unhealthy habits, **it may take a month or so before your body's natural fat burning mode has repaired and the weight starts to drop off.**

So while some people may drop 10 lbs in as little as 2 weeks, if you're looking for a magic pill that helps you lose weight overnight you should close this page and look elsewhere.

As Provitalize is designed for long-term body and health transformation. Not a sudden drop on the scales followed by rebound weight a few weeks later.

Yet, if you're willing to give it a try, here at Better Body we're convinced you'll be delighted by the transformation in your ability to lose weight and boost your health.

Just as...

Over 12,000 People Have Experienced from Provitalize.

By rebalancing their bacteria with the good guys, Provitalize has enabled thousands of people to finally break free of the misery of dieting, calorie counting, and deprivation.

Instead, by restoring and strengthening their body's natural fat burning ability, they've finally fixed what was driving their chronic weight gain all along.

And with their bodies burning fat like they're supposed to, they've gained the slimmer, healthier physiques that give them a lift in confidence that's obvious for everyone to see.

And we've got the reviews to prove it.

Before I share them with you, I understand how difficult it is to trust reviews these days.

Whether it's the suspicious five star reviews on Amazon that are thin on detail or the raving reviews on supplement websites, it's wise to be cynical of anything you read online.

So rather than collect reviews ourselves, we use a third party platform called Okendo. All the reviews have been collected and verified by them. They even take extra steps to ensure that the person who gave 5 star reviews have actually bought, tried and lost the pounds they claim.

So you can be rest assured that every review is from a real person who's tried using Provitalize to restore their body's natural fat burning mode and has succeeded in putting their chronic weight gain struggles in the past.

So, what do the reviews have to say?

Well, overall, Provitalize has a **4.8 out of 5 stars average rating**.

This is from over 100 reviews and the countless stories we've received from people who've finally succeeded in gaining their dream body thanks to Provitalize.

This includes Jennifer Stillwell, 54 from Southern California. After taking Provitalize for a few weeks she stopped craving sugary treats between meals or 'nibbling' in front of the TV.

She says,

"This is my third month taking Provitalize and I like it very much it's really cut down my appetite I've lost about 15. I hope to eventually lose about 30 more!"

Billie Arnold from Pittsburgh had a similar positive experience. Her clothes started to feel looser within a few weeks and she stopped snacking between meals. She says:

"I've been taking it for about a month and a half. I have seen my belly fat almost reduce two inches. I've dropped about five or six pounds and I sleep better. It's like I have better gut health and I just have more energy. So I'm very happy with Provitalize and I will continue to take it. I highly recommend it to anybody else that's on the fence about trying something different."

Or how about Betsy Ortolano, 51 year old from Chicago. Her cravings for sweets have faded while her energy levels have gone through the roof since adding Provitalize to her diet.

She says:

"I am now in my second bottle of Provitalize and I couldn't be happier. I have seen some diminished belly fat, definitely increased energy levels. I no longer need that afternoon nap anymore and my digestive issues are definitely not as severe as they used to be. So if you are experiencing any of the issues that I have I would highly recommend that you try Provitalize."

These are just a few reviews selected at random. And none of these people are gym bunnies, clean eating freaks or people who went on extreme diets. They're just ordinary people who were 5, 10 or even 15 lbs overweight, and were willing to give Provitalize a try.

So after reading this page, you now know:

- ✓ **Why dieting, calorie counting or brutal exercise will never help you lose weight long-term unless you fix your body's natural fat burning mode.**
- ✓ **How your body's ability to burn fat has been destroyed by heavy use of antibiotics, processed food, stress, and unhealthy habits.**
- ✓ **How Provitalize's unique combination of natural ingredients help your body to complete the vital four step process needed for it to restore and revitalize its natural fat burning mode.**
- ✓ **Why Provitalize's unique formulation, delayed release capsules and 4.8 star rating make it the optimum way of losing weight effortlessly with none of the pain or struggle of dieting.**

So I expect you're now wondering how much you'll need to invest for a one month supply of Provitalize's optimal fat burning formula?

Well, because you've read to this point, as a reward you won't need to pay the recommended retail price, or anywhere close.

I'll reveal the special offer price you can get via this page in a second.

First, let me ask you this...

What is finally gaining a slimmer body worth to you?

If you could lose the 5, 10 or 15 lbs you need to achieve your dream body, what value would you place on feeling confident about the way you look?

How much would it improve your life to gain a body brimming with natural energy, inner peace from balanced hormones, and the vigor to embrace every day with joy?

I know changes like this may sound over the top.

Yet the reality is that when you feel good about your appearance, it changes everything.

It lifts your spirits. Makes you feel more in control of your life, and helps you project a newfound confidence that's impossible to ignore.

Just imagine meeting old friends for lunch in a few weeks time and they notice something different about you.

Your clothes are hanging looser...

Your face is thinner and more defined...

Your stomach is flat as pancake, and your arms lean and toned...

And it's clear from the grin on your face that **you've finally solved the weight loss riddle.**

They beg to know your secret.

Is it a new celebrity diet? Green detox tea? Some new workout guru you found on YouTube? Or did you just starve yourself for weeks?

Whether you reveal your secret or not is up to you.

Yet it's a secret you share with the 12,000 over people whose bodies, health, and lives have all been transformed thanks to the gut enriching power of Provitalize.

A simple realization that as long as your body's fat burning mode is working like it's supposed to your body can handle weight loss on its own.

And this is exactly what Provitalize is designed to do.

When Provitalize sells in stores it will have a recommended retail price of \$99 for a 30-day supply.

That's about \$3 a day - a little less than a Caffe Latte from Starbucks.

When you consider all the long-term transformative benefits of Provitalize, \$3 sounds like a fair deal.

And if you knew how much time and money we've invested in creating Provitalize, we think you'd agree that \$99 is how much it should retail for.

Yet, because you've read to this point, you've proven that **you're someone who takes their health seriously.**

You're someone who's had enough of restrictive diets and misery and finally wants to put their weight loss challenges behind them.

So from this page only and before it's released in stores, you can purchase a 30-day supply of Provitalize with a 32% discount for just \$67.

This reduces your daily investment from \$3 down to just \$2 a day.

Consider Provitalize the body slimming replacement for a Starbucks Breakfast Sandwich - a drop in the ocean for gaining the body of your dreams.

If this sounds good to you, to order your 30 day supply of Provitalize all you need to do is press the button below.

You'll then be taken to an ordering screen that looks like this.

A screenshot of a web-based ordering form. The form is titled "Step 1 of 3" and "Lifeskin.co". It has a yellow banner at the top that says "Your cart is reserved for 45.00 min. Fill out the form below to complete your order." Below this, there's a section for "Customer Information" with a text input for "Email" and a checkbox for "Subscribe to our newsletter". The "Shipping Address" section includes fields for "First name", "Last name", "Company (optional)", "Address", "City", "Country" (a dropdown menu showing "Portugal"), "Zip code", and "Phone". The "Billing Address" section has a radio button for "Same as shipping address" and a checkbox for "Use a different billing address". The "Shipping Method" section has a dropdown menu with "Enter your shipping address to see shipping options". The "Payment Information" section has a note "All transactions are made with encrypted" and a checkbox for "PayPal". At the bottom, there's a yellow "Complete Purchase" button and a security notice: "Our trusted payment processors (data is secured by McAfee SECURE and TRUSTe) ensure your information is protected by 256-bit encryption." The right side of the form shows a summary of the order: "4 Boxes of Provitalize (Best Value Bundle)" for \$199.00, a "Coupon" field, a "Subtotal" of \$199.00, and a "Total" of \$199.00. There are also two promotional banners: "365-Day Money-Back Guarantee" and "Over 30,000 Boxes Satisfactorily Shipped".

Simply enter your shipping and payment details.

Your information is protected by 256-bit secure shopping cart where 100% of your data is encrypted by McAfee Secure and TrustE Certified Privacy.

This is the same data security used by most banks, government and military organization.

So you can be assured your information is lock tight secure and won't be shared with anyone. And that includes us.

Once completed, your order of Provitalize will be packed in our warehouse, and then shipped.

Shipping is free if you're in the US or Canada. If you live elsewhere, we'll need to add a small fee.

Then when it arrives, simply take Provitalize once a day to restore your body's natural fat burning mode and wave your weight gain troubles goodbye.

So let's get started towards achieving your dream body.

To claim your discounted one month supply of Provitalize simply press the button below, complete the order form, and your order will be shipped promptly.

Yet, if you need more reason to be confident ordering Provitalize, we're going to guarantee the results you can expect.

Ensuring Provitalize helps you attain the slim, sexy body you've always wanted is what matters most to us.

So we're going to remove all the risk with a no questions asked 60 day money back guarantee.

Either you succeed in finally losing the layers of stubborn visceral fat that are making you feel unattractive, unhealthy, and drained of energy...

And you see a thinner, healthier and happier version of you emerging in the mirror... or you won't pay a cent.

It's that simple.

Gaining the slender, healthy, and sexy body of your dreams is what counts.

Results you can see and feel.

So you can try Provitalize for up to 60 days.

If you're unsatisfied for any reason, simply send our customer services team an email and your purchase will be refunded in full.

In fact, if you don't lose at least five pounds in that time we insist that you do.

So click the button below right now to order your risk free supply of Provitalize.

Before claiming a refund, all we ask is that give Provitalize a fair go.

When it arrives in the mail, take a photo of yourself and note down your weight.

Then take another photo two weeks later and note down your weight again.

We're confident you'll be delighted by what you see.

Just as many of our 12,000 customers have been when they saw what a difference restoring their fat burning mode with Provitalize made to their weight, appearance and all round satisfaction in life.

So there's absolutely no-risk in clicking the button and giving Provitalize a try.

You either start to lose weight and slim down to gain your dream body or you get your money back. You can't say fairer than that.

The bottom line is this - as long your natural fat burning mode is broken you will never succeed in losing weight long-term.

Instead, your body will forever struggle to convert food into nutrients and fat into energy.

More and more fat will get locked away in your cells to create ugly rolls around your stomach, upper arms, thighs and other problem areas.

Close your eyes for a second and think about your body. Are you happy with how it feels?

Are you happy with your energy levels, mental clarity, and all round health?

If you think it could be better, the ugly truth is that the longer you leave fixing the damage done by antibiotics, processed food, stress, and other factors the worse these feelings will get.

Diets may work in the short-term. But unless you restore the thin bacteria in your gut, your food cravings will only get worse.

Your body will only go into starvation mode, and then when you do crumble and start eating normally again you'll put on rebound weight with a vengeance.

Here at Better Body, we don't want that to happen to you.

As you've read to this point, it suggests you're sick and tired of battling chronic weight problems.

That being overweight is making you feel ashamed.

Maybe you feel it's your fault you're carrying around extra weight.

That when people see you they think you lack willpower.

That you're lazy, unsuccessful and not in control of your life.

Perhaps you fear you'll never feel attractive or confident about your appearance ever again?

Well, as I revealed on this page, struggling with chronic weight problems isn't your fault at all.

You didn't knowingly choose to have your gut firebombed by antibiotics prescribed by your doctor or due to the food industry's hunger for profits.

You didn't choose to be a victim of the sugars and additives packed into processed food...the chronic stress...or other factors that wreck your gut's ability to burn fat like it's supposed to.

So if your gut bacteria is out of whack and it's made you overweight, you're not to blame. Before reading this page, you didn't know any better.

But now you do.

So, if you now choose to close this page and go back to your normal eating habits and don't take the nutrients your body needs to repair its natural fat burning mode, being overweight in the weeks, months and years ahead will be your fault.

Today, right now, you can choose to make a change.

All you need to do is take Provitalize diet, and allow its unique combination of natural ingredients to restore and revitalize your body's ability to burn fat like it's supposed to.

Completing your order takes less than one minute. And you'll then have the peace of mind knowing you've done what you need to to fix your chronic weight gain problems once and for all.

So click the button below to make a change that you'll soon see and feel whenever you look in the mirror.

Just imagine in a few weeks time...

One day you notice the way your partner looks at you has changed.

That twinkle in their eye when they look at you has returned.

And it's not just because your stomach is flatter...your arms thinner...your legs slim like a supermodel's, and you have a face with clearer, tighter and blemish free skin...

It's the confidence and pride with which you glide across the room.

The newfound assertiveness that matches the beauty you feel on the outside.

It will be like you've just started dating again.

With them unable to keep their eyes off you during the day...

and their hands off you at night.

This may sound like a fantasy.

Yet, the bottom line is this - Provitalize has the proven science...optimized ingredients list...and a track record to support its claims to being the most effective weight loss probiotic on the market today.

And via this page you can get a 32% discount on the recommended retail price, along with the two bonuses.

So now you have a decision to make.

You can close this page and go back to suffering from uncontrollable food cravings and chronic weight gain.

You can continue jumping from diet to diet, battling with hunger, misery and frustration. And wasting your money on cheaply made supplements that barely work.

Or you can try Provitalize risk free for 30 days.

You can choose to allow Provitalize to feed your body with the nutrients it needs to burn fat like it's supposed to.

For just \$2 a day you can be feeding your body with premium grade probiotics that restore your natural fat burning mode...

So you can FINALLY say "No!" to feeling tired, fat, and unattractive and say "Yes!" to gaining a slim, trim, sexy body

Remember, your purchase of Provitalize is protected with a 60 day money back guarantee. If you're less than thrilled with Provitalize for any reason at all, simply let us know and every cent will be refunded.

The only risk is leaving this page and feeling that horrible pain of regret that you didn't take the chance to fix your chronic weight gain problems and finally succeed at achieving your dream body.

You deserve to feel happy and confident with how you look.

Soon your weight loss struggles can be over, and a new dawn of being healthy, happy and in control of your body can begin.

Take that step right now towards your healthier, slimmer, and happier future.

Click the "Add to Cart" button and claim your risk-free supply of Provitalize today.

After all, why be envious of slim people when you can be one?

P.S. Even if you've never taken an antibiotic in your life, eating too much processed food can also wreak havoc to your gut. So if you have 5, 10, or 15 lbs of stubborn belly fat or suffer from indigestion problems, low energy, or brain fog, the problem is that your gut isn't working like it should. Provitalize can replenish your gut with healthy bacteria within 30 days and restore your body's ability to turn food into nutrients and fat into energy. Why struggle with dieting or brutal exercise when Provitalize can help you lose weight effortlessly on its own?

P.P.S. Provitalize is supplied with a no questions asked, hassle free 60 day money back guarantee. **Either you lose weight, improve your digestion, have more energy, and feel more alive or you can get your money back.** In fact, if you aren't absolutely delighted with the transformation you experience from Provitalize, we insist that you do.

FAQ

How do I know it's working?

As Provitalize's 3 key probiotic strains and 5 natural ingredients start to replenish your microbiome with healthy bacteria you should notice all sorts of small changes that build over time.

As your body's ability to properly digest food improves, you should notice fewer digestive symptoms like bloating, cramps, or IBS. You may find your energy levels start to improve as your body turns fat into fuel.

The gnawing cravings you have for sugary snacks should start to fade as the sugar craving microbes are wiped out, which also means less comfort eating. You may find you have to start doing your belt up at a tighter notch as visceral fat melts away from your belly and your stomach becomes flatter.

Partnering the physical changes will be how you feel inside. A healthier gut can help balance your hormones, so you experience less stress and happier moods. And the confidence you'll gain whenever you catch your reflection and see your slimmer, sexier body will be the ultimate sign that Provitalize is working.

What if Provitalize doesn't work? Can I get my money back?

Provitalize contains the 3 optimal probiotic strains for weight loss, along with 5 other science backed ingredients. It has an average 4.8 out of 5 star ratings, hundreds of positive reviews, and has helped over 12,000 people to revitalize their gut health to

trigger effortless weight loss. So it has both the science and the real world testimonials to prove it's effective.

However, if you are unsatisfied for any reason at all, your purchase of Provitalize can be refunded within 60 days. What matters is getting results you can see and feel, and a transformation that fills you with inner joy and confidence in how you look.

Could it be possible the food industry knows that the amount of antibiotics they feed to livestock may also be making people eat more, and they're continuing the practice to increase their profits?

There's no cast iron proof that the food industry know about the link between antibiotics and uncontrollable food cravings and chronic weight gain. It could be that obesity increasing at the same time as heavy use of antibiotics is a coincidence, and other factors are at play.

We may never discover the truth until there's an official government enquiry. So on this page we've just presented the evidence so you can make your own mind. Yet if there are forces out there conspiring to keep you fat and hungry, losing weight and getting healthy is the best revenge.
