

Green Valley - Vital Force Emails

Email 1 subject lines:

1. Do THIS to overtake your grandkids on hikes
2. The KEY to peak lung and immunity health
3. Feel more energized without exercise
4. Go back to leaping up stairs like a gazelle
5. The REAL reason we get tired with age

Over 80,000 studies reveal the KEY to peak lung and immune health.

It's not vitamin D, vitamin C or even nitric oxide. Yet it's a deficiency that can be FIXED starting in one hour.

Why do we get more out of breath as we age?

Puffing and panting up the stairs... when we'd leap up them like a gazelle when we were younger?

Sure, weaker muscles is a factor.

But there's another reason at play: A deficiency of a KEY molecule.

A molecule needed to keep the air sacs and airways of your lungs clear of debris... so that every gulp of air feeds your body with life giving oxygen.

And a molecule that ALSO puts out fires of inflammation... hunts down free radicals... and wipes out toxic invaders like an elite assassin squad.

So you see, it's no wonder over 80,000 studies now say this molecule is the KEY to peak lung and immunity health:

- The University of Michigan found it accounts for nearly a QUARTER of all factors that decide whether we age in robust good health, or go downhill fast.
- People enjoying active lifestyles in their golden years have 11 times more of this molecule than those struggling through the day on a daily cocktail of pills.

But here's the thing...

Levels of this life enhancing molecule plummet after age 40. In fact, by age 60 you may have HALF the amount you enjoyed in your energetic 20s.

This explains why flights of stairs look more daunting...

We can't enjoy hikes with the grandkids without struggling to keep up...

And we become more fearful of colds and flu.

Now here's the good news...

A good friend of mine - Dr. Russell Canfield - has found [a way of revitalizing this molecule starting in one hour.](#)

It doesn't involve breathing into a mask or any dangerous drugs.

Yet his method is helping his patients embrace life again with healthier lungs, a recharged immunity shield, and boundless energy.

Even better, Dr. Canfield has agreed to share his discovery with you in the following article:

We hear a lot about boosting the 'immunity shield' these days.

But what does that *even mean*?

What is the 'immunity shield' exactly?

One way to describe it is a security blanket. A blanket that protects the lungs and neutralizes invaders before they do us harm.

This security blanket is made from one KEY molecule.

No, it's not nitric oxide. But a molecule that's 5,000 times stronger than any other antioxidant in your body. In fact, over 80,000 studies show this molecule is the KEY to peak lung and immune health.

But here's the thing...

After age 40, levels of this molecule plummet.

Without enough of this molecule, the security blanket protecting your lungs can get holes. Holes which nasty toxins can sneak through... sabotage your lungs... and attack your immune defenses from the *inside*.

Now here's the good news...

Anti-aging specialist Dr. Canfield has found a [5 second hack for replenishing this security blanket molecule](#).

His method doesn't involve dangerous drugs or strenuous exercise. Yet it can help protect the lungs, seal any holes in your immunity shield, and wipe out toxic invaders around the clock.

Dr. Canfield's patients now use this method to feel younger, healthier and more energized.

And it's proven so successful, Dr. Canfield has agreed to share his discovery with you in the following article:
